

Objective

This code example implements a standard USB HID Mouse with a single button. The mouse cursor will move in the shape of a box on the screen.

Overview

This project demonstrates the use of the USBFS component to implement a HID mouse. Using the standard HID mouse descriptor the PSoC enumerates as a mouse on the PC. Once the enumeration is complete the PSoC sends data about the relative movement of the mouse to the PC. A single button is also implemented in the project to emulate the left button, or button 1, on a standard mouse. You can hold down the button on the kit and watch the cursor highlight text or select items on a desktop while it draws the box.

PSoC Resources

Cypress provides a wealth of data at www.cypress.com to help you to select the right PSoC device for your design, and quickly and effectively integrate the device into your design. For a comprehensive list of resources, see [KBA86521](#), [How to Design with PSoC 3, PSoC 4, and PSoC 5LP](#). The following is an abbreviated list for PSoC 5LP:

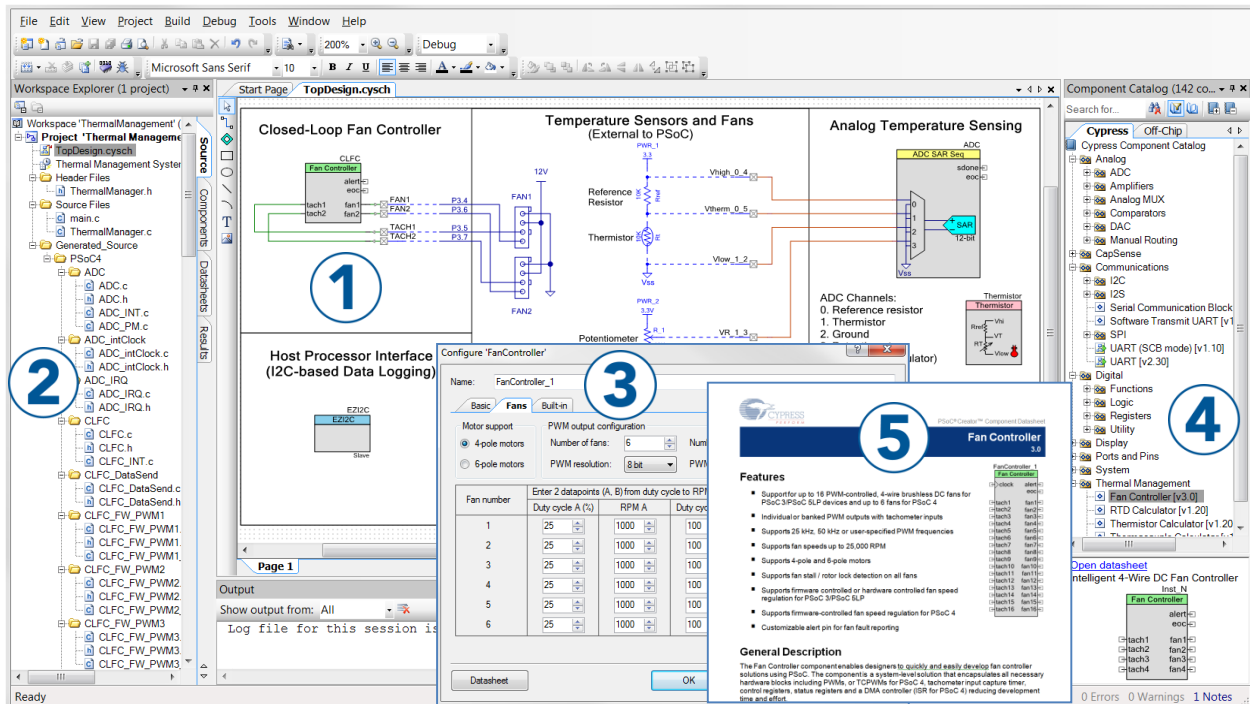

- **Overview: PSoC Portfolio, PSoC Roadmap**
- **Product Selectors: PSoC 1, PSoC 3, PSoC 4, or PSoC 5LP.** In addition, **PSoC Creator** includes a device selection tool.
- **Datasheets:** Describe and provide electrical specifications for the **PSoC 5LP** device family.
- **CapSense Design Guide:** Learn how to design capacitive touch-sensing applications with the PSoC 5LP family of devices.
- **Application Notes and Code Examples:** Cover a broad range of topics, from basic to advanced level. Many of the application notes include code examples.
- **Technical Reference Manuals (TRM):** Provide detailed descriptions of the architecture and registers in each PSoC 5LP device family.
- **Development Kits:**
 - **CY8CKIT-001** is a common development platform for all PSoC family devices.
 - **CY8CKIT-050** is a development platform targeted at analog intensive designs for PSoC 5LP.
 - **CY8CKIT-030** is a development platform targeted at analog intensive designs for PSoC 3.
 - **CY8CKIT-059** is a rapid prototyping kit for PSoC 5LP.
- The **MiniProg3** device provides an interface for flash programming and debug.

PSoC Creator

PSoC Creator is a free Windows-based Integrated Design Environment (IDE). It enables concurrent hardware and firmware design of systems based on PSoC 3, PSoC 4, and PSoC 5LP. See [Figure 1](#) – with PSoC Creator, you can:

1. Drag and drop Components to build your hardware system design in the main design workspace
2. Codesign your application firmware with the PSoC hardware
3. Configure Components using configuration tools
4. Explore the library of 100+ Components
5. Review Component datasheets

Figure 1. PSoC Creator Features

Requirements

Tool: PSoC Creator 3.1 SP2 or later

Programming Language: C (GCC 4.8.4 or later)

Associated Parts: All PSoC 3 and PSoC 5LP parts

Related Hardware: [CY8CKIT-059](#), [CY8CKIT-001](#), [CY8CKIT-050](#), [CY8CKIT-030](#)

Design

The PSoC Creator schematic for the code example is shown in Figure 2.

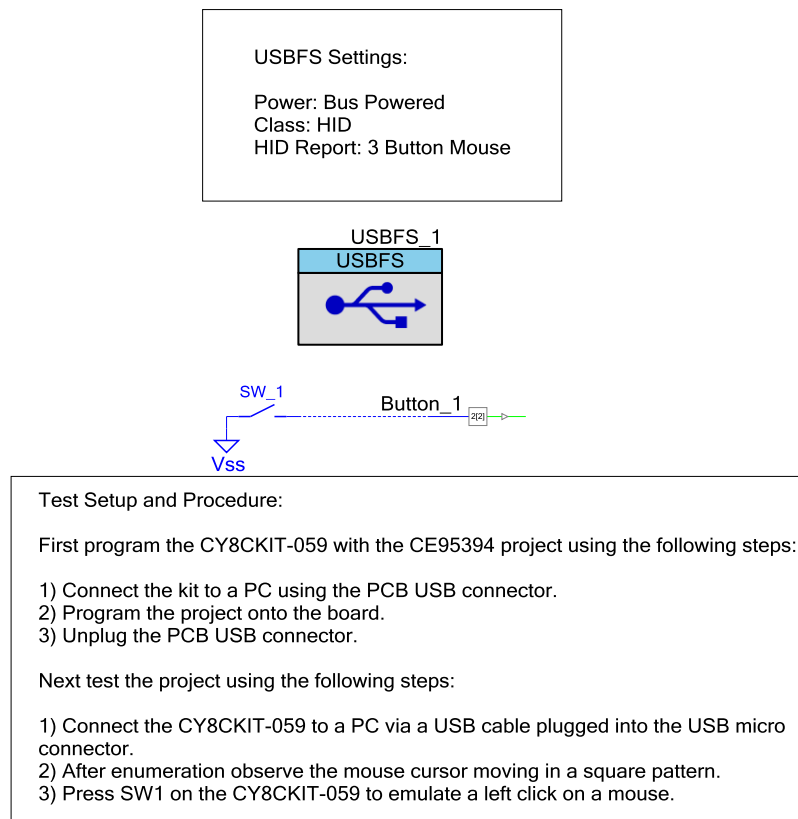

Figure 2 USB HID Mouse Code Example Schematic

The code example uses the USBFS component to implement the HID mouse and a digital input pin configured in resistive pull-up mode to implement the mouse button.

All of the firmware for the code example is implemented in main.c. The firmware performs the following functions:

- 1) Enumerates the PSoC as a HID mouse.
- 2) Sends a packet of data with the mouse movement and buttons status to the PC.
- 3) Waits for the last packet to be acknowledged by the PC.
- 4) Updates the position data and button data after a brief delay.
- 5) Loads the new mouse data into the USB end point to be sent to the PC.

Design Considerations

The design can be extended to implement a functional mouse by adding real user input to load the X and Y position data with. This could be a joystick or a trackball fed into the ADC.

Hardware Setup

Once the project has been programmed, just plug in a USB cable to the micro-USB connector on your kit.

Software Setup

There is no special software setup to use this project. HID drivers come standard on most OS's, which is the benefit of creating a HID device.

Components

Table 1 lists the PSoC Creator Components used in this example, as well as the hardware resources used by each.

Table 1. List of PSoC Creator Components

Component or User Module	Hardware Resources
USBFS	USB
Pin	1 pin for the mouse button
